Visual Studio Code interface showing a Terraform configuration file (`main.tf`) and the terminal output.

main.tf:

```
1 locals {
2   policy_name = var.policy_name == null ? "${var.application_name}: APM Monitoring" : var.policy_name
3 }
4
5 resource "newrelic_alert_policy" "policy" {
6   name           = local.policy_name
7   incident_preference = var.incident_preference
8   channel_ids    = var.channel_ids
9 }
10
11 resource "newrelic_nrql_alert_condition" "apdex_condition" {
12   policy_id = newrelic_alert_policy.policy.id
13
14   name           = "Apdex (Low)"
15   type           = "static"
16   runbook_url    = var.runbook_url
17   enabled        = true
18
19   warning {
20     operator      = "below"
21     threshold     = var.apdex_warning_threshold
22   }
23 }
```

Terminal Output:

```
newrelic_nrql_alert_condition.error_rate_condition: Creation complete after 1s [id=4343218:32146195]
newrelic_nrql_alert_condition.apdex_condition: Creation complete after 2s [id=4343218:32146196]

Warning: Argument is deprecated
with newrelic_nrql_alert_condition.apdex_condition,
on main.tf line 35, in resource "newrelic_nrql_alert_condition" "apdex_condition":
35:   evaluation_offset = 3
use "aggregation_method" attribute instead
(and one more similar warning elsewhere)

Apply complete! Resources: 3 added, 0 changed, 0 destroyed.
PS C:\Users\lenovo\Desktop\terraform_newrelic>
